Module: Auth Test Cases

Test Case ID:	TC_SEC_AUTH_01		
Designed by:	Danny D. Dinglasa Jr.	Tested by:	Pheinz Reneil T. Magnun
Test Title:	Verify User Authentication and Role Isolation		
Pre-conditions:	1. User is on the Welcome/Login screen.		

#	Test Steps	Expected Result	Status	Recommendation
1	Log in with invalid credentials.	Error message 'Invalid email or password' is displayed.	PASSED	Perform regular integrity checks on data backups and conduct disaster recovery drills.
2	Register a new Doctor account.	Doctor is redirected to 'Pending Approval' screen and cannot access dashboard.	PASSED	Perform regular integrity checks on data backups and conduct disaster recovery drills.
3	Attempt to access /dashboard as an unauthenticated user via deep-linking.	System redirects to Login screen.	PASSED	Maintain a regular schedule for rotating API keys and database credentials every 90 days.
4	Perform 'Logout' from the drawer menu.	Session is cleared and user is returned to Welcome page.	PASSED	Maintain a regular schedule for rotating API keys and database credentials every 90 days.

MaternalCare - Security Test Case Documentation

Module: Security Features Test Cases

Test Case ID:	TC_SEC		
Designed by:	Danny D. Dinglasa Jr.	Tested by:	Pheinz Reneil T. Magnun
Test Title:	Manual Verification: Security Features		
Pre-conditions:	Admin access required.		

#	Test Steps	Expected Result	Status	Recommendation
1	Attempt to delete 'admin@test.com' as any admin user.	System prevents deletion. Delete button is hidden; API rejects delete request.	PASSED	Implement multi-factor authentication (MFA) for administrative and medical staff accounts.
2	Log in as Secondary Admin and attempt to delete another admin account.	Standard admins cannot delete peers. UI restricts action; API returns 403.	PASSED	Implement multi-factor authentication (MFA) for administrative and medical staff accounts.
3	Access restricted routes (/logs, /users) as a Patient user.	Access blocked by RBAC middleware. User redirected to home page.	PASSED	Ensure all sensitive data is encrypted at rest using industry-standard AES-256.
4	Login attempt with a newly registered Doctor account (Pending status).	Login restricted with message: 'Doctor account is pending approval'.	PASSED	Perform regular integrity checks on data backups and conduct disaster recovery drills.
5	Perform administrative action and verify Activity Logs.	Action is logged with actor, timestamp, and event details.	PASSED	Perform regular integrity checks on data backups and conduct disaster recovery drills.
6	Check password storage format in database.	Passwords stored as secure Bcrypt hashed strings (\$2b\$).	PASSED	Ensure all third-party dependencies are audited and updated to their latest stable versions regularly.
7	Submit assessment with body temperature in Celsius.	Input automatically converted to Fahrenheit for system-wide consistency.	PASSED	Ensure all sensitive data is encrypted at rest using industry-standard AES-256.

General System Recommendations

- Conduct quarterly penetration testing to identify and patch new vulnerabilities.
- Ensure all sensitive data is encrypted at rest using industry-standard AES-256.
- Implement multi-factor authentication (MFA) for administrative and medical staff accounts.
- Maintain a regular schedule for rotating API keys and database credentials every 90 days.
- Establish real-time monitoring and alerting for suspicious activity logs.
- Perform regular integrity checks on data backups and conduct disaster recovery drills.
- Ensure all third-party dependencies are audited and updated to their latest stable versions regularly.
- Implement a strict 'Least Privilege' access control model across all system modules.

MaternalCare - Security Test Case Documentation

Final Testing Summary

Test Case ID	Title	Remarks	Recommendation
TC_SEC_AUTH_01	Verify User Authentication and Role Isolation	PASSED	Perform regular integrity checks on data backups and conduct disaster recovery drills.
TC_SEC	Manual Verification: Security Features	PASSED	Implement multi-factor authentication (MFA) for administrative and medical staff accounts.

Conclusion: All security test cases listed above have achieved a status of 'PASSED'. The verified authorization protocols and data protection mechanisms demonstrate full compliance with security requirements.
